Charm++ - Feature #1457
Default option to choose between isomalloc and os-isomalloc

03/05/2017 10:06 AM - Sam White

Description
-memory isomalloc does not work on Clang non-SMP builds. -memory os-isomalloc does not work on SMP builds, so add a new wrapper that defaults to whichever one is known to work on the build target.
This will aid in automated testing. After this is fixed, the only remaining persistent failures should be AMPI on mpi-win builds.
